

FORTRESS SOLUTIONS PRIVATE 5G/LTE SERVICES

Private Wireless Network deployments, LTE today with 5G quickly coming to reality, are growing dramatically throughout the U.S. and the world. There is a great rush to fund, engineer, & deploy as quickly as possible. With local communities, enterprises, services providers, and vendors racing to build, **who is thinking about deployment acceleration and network operations post deployment?**

Can these private networks deliver the expected long-term objectives without proper long-term management and care? Do network owners have the tools & expertise to maintain, grow, and optimize these networks when the engineers and equipment suppliers have moved on to the next deployment?

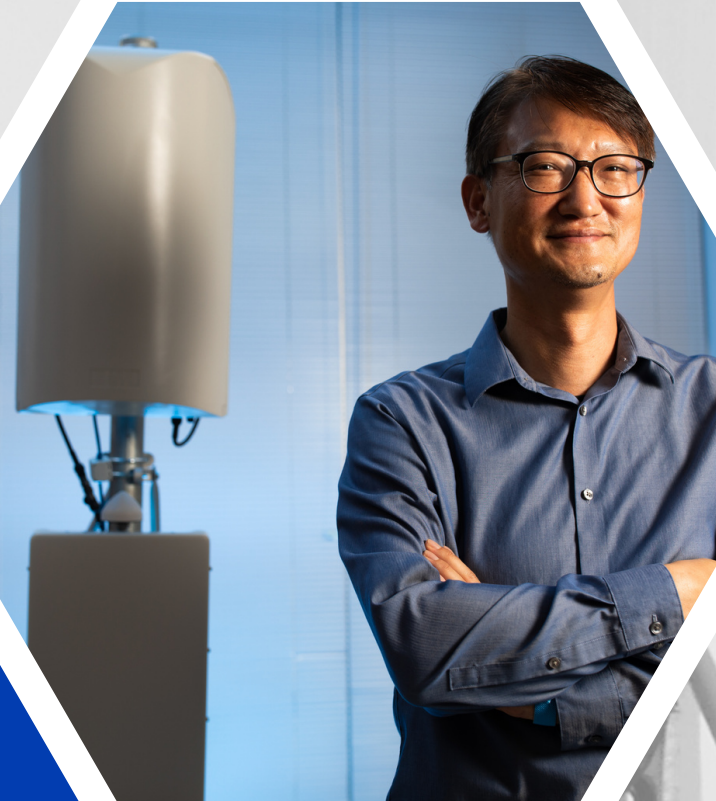

Fortress Solutions is partnering with LTE and 5G suppliers to bring **robust private wireless network managed services** to service providers, enterprises, and local communities.

Why Fortress?

We have the technical staff with the required network & product knowledge to **engineer, deploy, and maintain** networks for our customers.

We provide End-to-End Operational Services that allow our customers to focus on critical day-to-day activities that affect future programs and growth.

OUR SERVICES

END-TO-END PRIVATE WIRELESS SOLUTIONS

- Deployment Services
 - Site survey
 - System design - sizing & scaling
 - Design reviews with customers
 - Installation
 - Commissioning & integration - RAN, CORE, & UE
 - SIM provisioning & management
- Maintenance & Performance (Network Operations Center)
 - Remote monitoring of network components, interfaces, & environment
 - Single pane of glass view to end-to-end network, providing comprehensive view of network performance & alarms
 - Customer/Partner portal & dashboards providing real-time & historical view of network performance
 - Reactive & proactive response to network alarms & anomalies, real-time KPI reporting
 - Moves/Adds/Changes/Decommissions (MACD)
 - Schedule maintenance (software upgrades & patches)
 - End user Help Desk (students, employees, customers)
- Call Center & Technical Support
 - Tier-1: Call center & basic support
 - Tier-2: Product & network services knowledge
 - Tier-3: Product experts
 - Tier-4: Escalation to equipment supplier (OEM) or system integrator (SI)
- Critical Sparring (shares depots with up to 4-hour response)
- Onsite Repair Services (wireless smart hands)
- Standard Network Elements Management
 - EPC and 5G core including: Athonet, Druid, Nokia, Ericsson, Motorola, Open Source
 - RAN: Airspan, JMA, Blinq, Nokia, Motorola
 - UE: Cradlepoint, Nokia, Motorola
- SAS Integration & Management: All SASs (Google, Federated...)
